

7mm Diamond Grille Security

Economical Security Solution

Add value to your home with the strength of Franklyn 7mm Diamond Grille doors and windows. Diamond Grille Security is a popular and economical solution to provide a physical barrier designed to discourage intruders from your home. At Franklyn we give you the choice of grille fixings, tailored to your requirements and budget, as described below:

7mm Screwed Diamond Grille:

The grille is fixed with high tensile screws into a deeper reinforced frame, engineered to absorb a number of impacts and to prevent the grille coming away from its frame.

7mm Welded Diamond Grille:

Welded security grilles offer a good level of security for your home. The 7mm grille is welded to a heavy-duty frame and is powdercoated in a colour of your choice.

Built with 7mm high-grade aluminum, Franklyn Diamond Grille Security is tempered for greater strength, resulting in added toughness.

The distinctive Diamond Grille pattern provides a visual deterrent to thieves. Virtually maintenance free, grilles and frames are available in a range of modern colours.

Features & Benefits

Why 7mm Diamond Grille Security is so popular

- Economical** Choose between screwed or welded Diamond Grille to find the best security for your needs and budget.
- Large range of colours** Match your existing colour scheme with our selection of standard or powdercoated colours.
- Your choice of insect mesh** For windows and doors choose from standard insect mesh, Clawproof mesh or fine sandfly mesh. One-way mesh is also available for doors.
- Triple security locks for doors** Hinged and sliding doors with Franklyn Security Grilles can be installed with 3 point locks to deter even the most determined intruder.

Riveted Diamond Grille is no longer manufactured by Franklyn. With developments in manufacturing we are able to produce the superior Screwed Diamond Grille for a similar cost to the basic Riveted system.

Optional Extras:

Safe-S-Cape See page 5

Reojamb See page 8

Triple Security Lock

Other Security Options

Reojamb – Anti-jemmy device for Security Doors

If a security door is forced or jemmied, the timber door jamb is likely to split – compromising your security.

To solve this problem Franklyn created Reojamb – an anti-jemmy device structured to improve the strength and security of your existing door jamb. Reojamb is installed from top-to-bottom of the entire door height on your door jamb which helps to distribute any impacts, reinforcing the whole door.

Made from heavy gauge aluminium, and available in many colours, Reojamb will blend unobtrusively with your security door.

Triple Security Lock – for Hinged & Sliding Doors

Hinged and sliding doors with Franklyn Security Grilles can be installed with 3 point locks to deter even the most persistent intruder.

Triple Security Locks come standard on Crimsafe® and is an optional extra on Diamond Grille and Decorative Doors.

Clawproof Mesh – resistant to animal scratches

Clawproof mesh is made from heavy duty PVC coated polyester and is resistant to tears & damage from household pets and children.

It can also be useful on doors and windows that are in high traffic areas, such as sliding screen doors, etc.

Prowler Guard

Made from clear polycarbonate, Prowler Guard can be fitted around the handle of your existing door lock to provide added protection against tampering of the lock.

Available on Heavy-duty Diamond Grille doors, Prowler Guard, prevents intruders sticking their fingers through the diamond grille and accessing the lock on the inside.

Petway Pet Doors

For those with small to medium-sized pets, a pet door is a convenient way to allow pets to move freely between inside and outside of the home.

Pet doors are built into the security door in a position of your choice. It is **important to note** that if the opening is too large it could compromise the integrity of the original security.

Petway pet doors are available in a range of many colours and sizes.

Did you know? Franklyn have been **manufacturing Crimsafe®** for over 20 years.
